

REACH Wireless®

Open-Area Wall Sounder VAD

Product overview	
Product	REACH Wireless Open-Area Wall Sounder VAD
Part No.	RW1500-210APO (White Body, White Flash) RW1500-220APO (Red Body, White Flash)
Digital Communication	Apollo protocol compatibility is handled via the Loop-Interface device, RW1700-030APO. See product for more detail.

Approvals

Product information

The RW1500-210APO / RW1500-220APO is a wireless analogue addressable interface and a conventional openarea wall sounder VAD that can be used as a stand-alone notification device.

- · Compatible only with REACH Wireless
- 16 tone pair settings (primary and secondary for alert and evacuation), selectable via on-board DIL Switches
- · Four Volume Settings
- Bi-directional wireless communication
- Dual channel redundancy
- · Four year battery life
- · Five year product warranty

Technical data

All data is supplied subject to change without notice. Specifications are typical at 24 V, 25°C and 50% RH unless otherwise stated.

Number of Tone Pairs 16 (see table 2) Volume Levels Four volume settings

88 - 91 dBA (tone dependant) Sound Output (Typical)

Communication Range between Loop-Interface and Devices

100 m (in open space)

VAD Coverage Rating (EN54-

Configurable - See Table 4

25)

Flash Rate 0.5 Hz Field Device Radio Frequency 22 pairs

Channel Pairs

Radiated Power 14 dBm (25 mW)

2x VARTA CR123A Lithium 3 V, Battery Type

1250mAh typical

Battery Lifespan Five years in normal operation with

good signal strength (no dropped

messages)

-10°C to +55°C Operating Temperature

Maximum Relative Humidity

(non-condensing)

95%

IP Rating IP 35 (Type B Indoor Use) Standards and approvals EN54-3, EN54-23, EN54-25

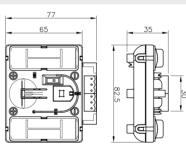

Dimensions 126 mm diameter x 132 mm height

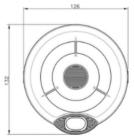

x 125 mm depth

Weight (including base and

batteries)

350 g

Status LED

The REACH Wireless Open-Area Wall Sounder VAD includes a 360° LED indicator which to indicate status conditions. See table 1.

Table 1: REACH Wireless Device Status & LED Indication **LED** Indication **Device Status** Tamper Not Tamper Activated Activated Power Un Blinks green four times Power Up (dip-switch ON) Blinks red four times Blinks alternatively green/red four Entering Wake-Up Blinks green four times, then Link Success repeats Enters wake-up mode and signals I ink Failure 'Entering wake-up mode' following this failure Normal Condition LED off LED off LED off Activation Red on Amber blinking **Battery Faults** LED off every 5s Tamper Fault I FD off Replaced Blinks amber two times

Tone & Volume Selection DIP Switch Settings

Medium High	01							
Medium Low	10							
Low	00							

*EN54-3 certified, for Tone Table (Table 4), see appendix

Device Addressing

Device addressing is handled by the REACH Wireless Loop-Interface device (RW1700-030APO).

Devices are soft-addressed automatically when pairing with the Loop Interface and can be changed manually. Hardaddressing using Apollo XPERT cards are not supported.

Communication

REACH Wireless Devices use 'radio-frequency' wireless communication to connect to the Loop-Interface.

The Loop-Interface (RW1700-030APO) translates the wireless communication into wired Apollo protocol communication, with each device addressable individually by the fire panel. See datasheets for the Loop-Interface for more information.

Maintenance and Service

Maintenance must be performed in accordance with all applicable standards. Clean the detector externally using a soft damp cloth. For full cleaning and recalibration detectors should be returned to Apollo Fire Detectors.

Batteries

REACH Wireless devices are supplied with two CR123 batteries, battery A and B. The device switches periodically between the two batteries on a controlled sequence. For correct operation of the device, both batteries are required with adequate capacity reserves.

When battery A reaches a low power threshold, it will trigger a fault. This fault requires both batteries to be replaced in every instance as both batteries should be discharging equally.

When one (or both) batteries lack power, the Loop-Interface receives a low battery message and will signal this event on its in-built display, as well as relay the low battery message to the fire control panel. The battery fault will also be signalled by the device itself through its LED indicators if programmed (see table 1).

Tamper detection

REACH Wireless devices contain an anti-tamper mechanism. In the event of removal from its base, it sends a tamper detection message to the Loop-Interface.

Tampering detection is not signalled visually by the device

EMC Directive 2014/30/EU

REACH Wireless Open-Area Wall Sounder VAD complies with the essential requirements of the EMC Directive 2014/30/EU, provided that it is used as described in this datasheet.

A copy of the Declaration of Conformity is available from Apollo on request.

Construction Products Regulation (EU) 305/2011

The REACH Wireless Open-Area Wall Sounder VAD complies with the essential requirements of the Construction Products Regulation (EU) 305/2011

A copy of the Declaration of Performance is available from Apollo on request.
